

OPERATIONAL ADVISORY GROUP (OAG) BRIEF

Nuclear, Biological and Chemical Defense

**Marine Corps Systems Command
NBC Defense Systems (PMM-163)**

OCT 2004

READINESS TOPICS

- **CONSOLIDATION UPDATE**
- **T/E CONCERNS AND ISSUES**

CONSOLIDATION UPDATE Concept

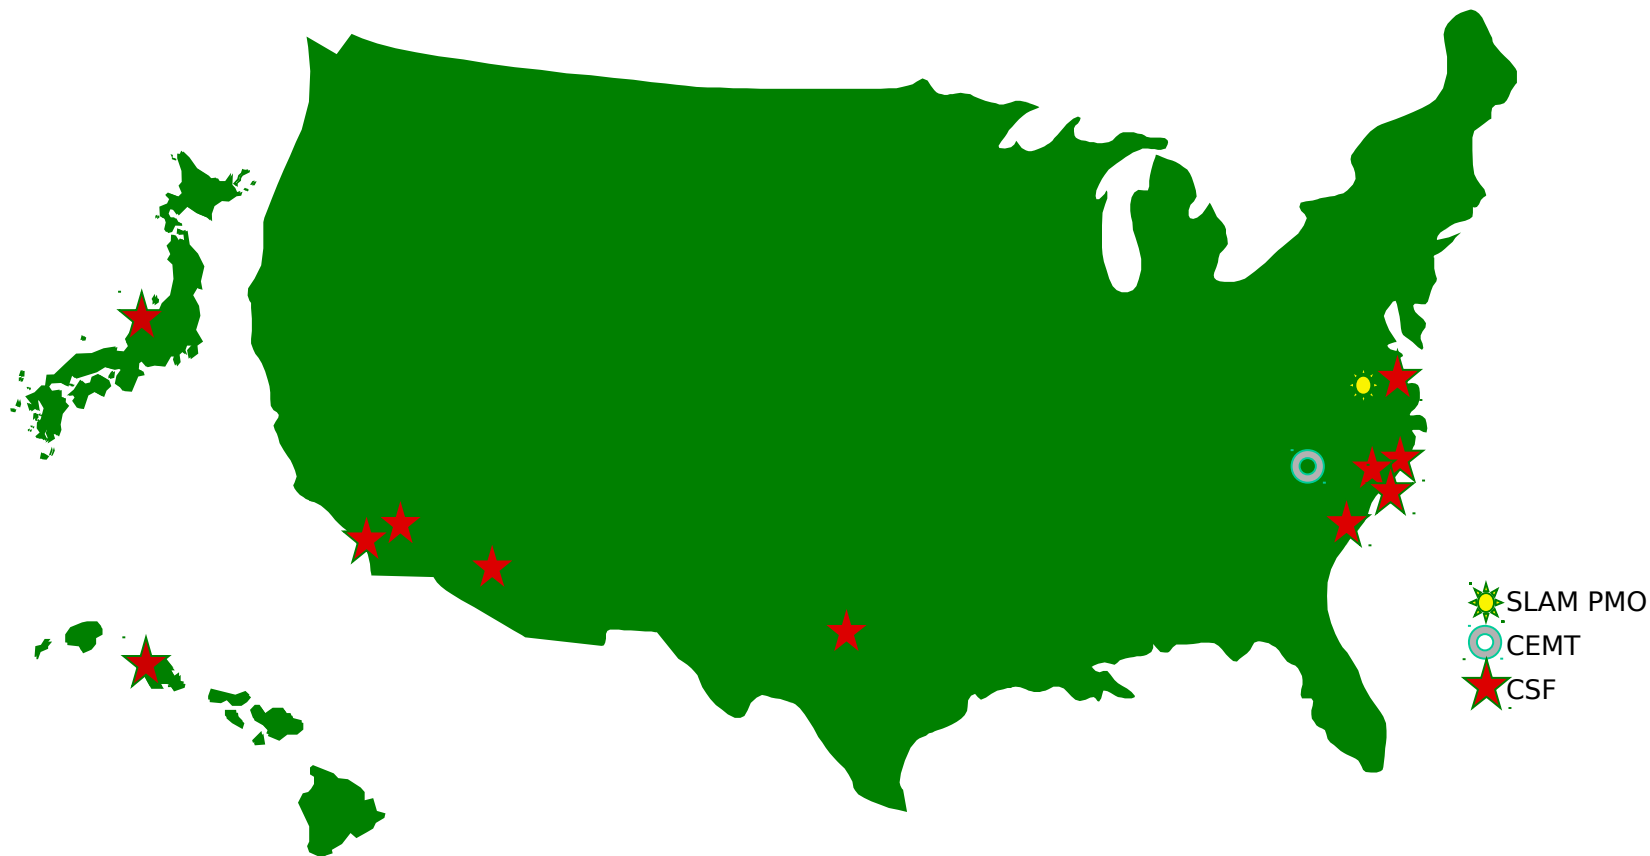

Consolidation will enhance future operational force capabilities by centrally managing NBCDE in order to establish an immediate and sustainable state of readiness in conjunction with constitution.

Planned network consists of 12 Consolidated Storage Facilities (CSFs) and 3 standalone Mask Issue / Recovery Points (MIRPS).

CONSOLIDATION UPDATE SLAM Network Locations

CONSOLIDATION UPDATE CSF Sequence & IOC Dates

- **OPERATIONAL CSF SITES:**

- Camp LeJeune 16 June
- Dallas / Fort Worth 30 August
- Yuma 15 Sept

- **CSF / MIRP SITES SCHEDULED FOR ACTIVATION**

- Cherry Point, Kaneohe Bay 25 Oct
- Beaufort, 29 Palms 6 Dec(29 Palms?)
- MirimarTent Oct/Nov
- Okinawa, Iwakuni 17 Jan
- Quantico 21 Feb
- New River 16 May

CONSOLIDATION UPDATE Trends

- **Across the effort, CSFs are receiving about 10% more equipment than reflected on old accounting records.**
- **M17 MCHF's are being turned in deadlined but not being reflected as such on the LM2.**
- **Calibration items are being turned in out of CAL.**

CONSOLIDATION UPDATE SLAM PMO

- **The SLAM PMO is the focal point for all NBCDE-related functions including program management, funding, acquisition, and asset visibility for all operational and supporting Commands across the Marine Corps.**
- **Points of Contacts:**
 - Mr. Wayne Bell bellwc@mcsc.usmc.mil
 - CWO2 Ken King kingka@mcsc.usmc.mil
 - Mr Jim Nelson nelsonjl@mcsc.usmc.mil

T/E CONCERNS AND ISSUES

- **STB Policy**
- **M41 PATS**
- **Establishment of NBC T/E for Deployment Processing Centers (DPCs)**
- **T/E allowances for Overboots.**
- **Masks for UDP BNs.**

T/E CONCERNS AND ISSUES

- **Subject:** STB Allowances and Storage Policy
- **Issue:** STB is the current standard for “Through Decontamination: and is a type II allowance, that is these allowances are “as required” and can be adjusted in writing by MEF Commanders or if delegated, to the major subordinate command level.
- **Recommendation:** That a MC policy be established for allowances based on the CSF concept (establish a base which to expand) and for the management of STB or any other decontamination agent.

T/E CONCERNS AND ISSUES

-
- **Subject:** CSF FPM Issue Process, use of M41 PATS or the JSMLT.
 - **Issue:** The CSF MIRP process is established and uses the M41 PATS to validate proper fit. A few Commanders representatives have asked the CSF management team not to follow this process and only use this it when the simple fitting method fails to establish a seal.
 - **Recommendation:** That a MC policy be established concerning the FPM issue process to include use or non use of the M41 PATS or the JSMLT.

T/E CONCERNS AND ISSUES

- **Subject:** Establishment of NBC T/E for Deployment Processing Centers (DPCs).
- **Issue:** Currently DPCs supporting the Mobilization, Activation, Integration and Deactivation Plan (MAID-P) for Individual Augments (IAs) and Combat Replacements (CRs) obtain Individual Protective Equipment from MEF Command Adjustments vice having established allowances for their mission.
- **Recommendation:** That T/E allowances be established and loaded to the TFSMS for each DPC.

T/E CONCERNS AND ISSUES

- **Subject:** Standardization categories for Overboots
- **Issue:** Currently we have created confusion with 3 established TAMCNs for Overboots. The MC has TAMCN C2132 established for MULO; TAMCN C2130 for GVO / BVOs; and TAMCN C2295 for Fishtails.
- **Recommendation:** That allowances be established for MULO as “standard” and that system technical data be changed to reflect other items being “substitute standard” to the MULO. All accountability will fall under one TAMCN.

T/E CONCERNS AND ISSUES

- **Subject:** UDP mask issue policy
- **Issue:** Currently units going on UDP turn in their masks and draw once arriving in Okinawa. This puts costs on both ends for new SL3 parts upon turn in and also adds additional cost for New Breed to temp people for the surge.
- **Recommendation:** The units would take their masks on UDP with them.
